

Samin Intisar

AI Engineer

✉ samintisaruni@gmail.com | 📞 (778) 317-0297 | 🌐 Website | 🔗 LinkedIn | 🐙 GitHub

Education

University of British Columbia, Bachelor of Science in Statistics, Concentration in Computer Science September 2021 - April 2026

Coursework: Data Analytics, Statistical Inference, Finding Relationships in Data, Statistical Modeling for Data Science, Relational Databases, Artificial Intelligence, Data Structures, Software Construction, Applied Machine Learning, Stochastic Processes

Technical Skills

AI and Machine Learning: LangChain, LangGraph (multi-step planning, agent orchestration, context/memory management), RAG (Retrieval-Augmented Generation) Pipelines, Vector Embeddings, Cross-Encoder Reranking, Prompt Engineering

Programming and Databases: Python (Pandas, NumPy, scikit-learn, PyTorch, Matplotlib), TypeScript, R, SQL (Postgres, MySQL)

Tools and Platforms: Convex, FastAPI, Streamlit, React, Jupyter Notebook, Together AI, Supabase, Cohere, Redis, Prometheus, Grafana, Vercel, Docker, Git/GitHub

Work Experience

Founder & Developer | SolomindLM | Website June 2025 - Present

- Architected and shipped SolomindLM, an AI research and study platform, end to end as a **production LLM SaaS** on a Convex backend with multi-tenant auth and Stripe billing, taking every feature from prototype to paying users across 10 surfaces
- Shipped **9 LangGraph agent graphs** (deep research, literature review, report, flashcard, quiz, mind map, spreadsheet, and more), each with its own tool integrations and multi-step planning, so one request produces a finished deliverable instead of a single reply
- Designed a **multi-stage RAG pipeline** with cross-encoder reranking and multi-modal ingestion across PDFs, audio, and web pages, cutting retrieval noise on long documents to keep citations accurate, behind a swappable model layer running mostly open-source LLMs with OpenAI and Anthropic as options, with cost controls built in
- Gated every release behind an **eval pipeline** scoring retrieval grounding, output correctness, and task completion, catching regressions from prompt or model changes before they reach paying subscribers
- Set up a GitHub Actions **CI/CD pipeline** so every pull request runs automated tests and lint checks before merge, with auto-deploy on merge to main, no manual deploy step
- Added **Redis-backed caching** and wired up Prometheus and Grafana to monitor SolomindLM in production

Data Analyst Intern | Spintech Associates | Remote May 2023 - August 2024

- Replaced a weekly manual Excel reporting process with live Power BI dashboards for sales KPIs, **saving 10 hours a week**
- Wrote SQL queries to extract and reconcile inventory data, **cutting stock discrepancies 15%** and sharpening demand forecasts
- Partnered with the sales team to turn pricing and promotional data into product-level insights that shaped campaign decisions, **driving an 8% revenue increase**

Projects

Quant Portfolio Optimization | Python, CVXPY, XGBoost, Random Forest, FastAPI GitHub Repo

- Built an end-to-end financial data pipeline and ML system. Engineered 41+ technical indicators from Yahoo Finance, trained Random Forest and XGBoost models **achieving 63.6% directional accuracy**, and deployed predictions via FastAPI REST endpoints
- Implemented walk-forward backtesting with 7.5 bps transaction costs and **portfolio optimization using CVXPY** (Mean-Variance, CVaR, Black-Litterman with Ledoit-Wolf covariance shrinkage)
- Delivered **risk analytics** (Sharpe ratio, max drawdown, volatility) across 19 stocks to evaluate risk-adjusted portfolio performance

CrownCall – Voice AI Scheduling Agent | Python, FastAPI, VAPI, OpenDental API GitHub Repo

- Built a FastAPI backend that lets a VAPI voice agent parse spoken dates and book, reschedule, or cancel OpenDental appointments, replacing a 6-node n8n flow and **cutting the booking path from ~4s to ~800ms p95**
- Designed an OpenDental adapter (FHIR dual-key auth, duration Pattern encoding, Break-API cancels) with a local availability calculator that recovered open slots on **~40% of queries** where the native slots endpoint returned empty
- Added connection pooling, retries, and a circuit breaker so PMS outages returned a spoken “call the office” fallback instead of a 5xx; **tool-call success stayed above 99%** in voice sessions

Awards

BC Hacks 4.0 November 2022

- Won the Most Diverse Hack Award for SpeedTrap, a native Android app that lets parents set speed thresholds for young/new drivers with automated SMS alerts on violations
