

# Samin Intisar

AI Engineer

samintisaruni@gmail.com | (778) 317-0297 | Website | LinkedIn | GitHub | Vancouver, BC

## Technical Skills

**AI and Machine Learning:** LangChain, LangGraph (multi-step planning, agent orchestration, context/memory management), RAG (Retrieval-Augmented Generation) Pipelines, Vector Embeddings, Cross-Encoder Reranking, Prompt Engineering

**Programming and Databases:** Python (Pandas, NumPy, scikit-learn, PyTorch, Matplotlib), TypeScript, R, SQL (Postgres, MySQL)

**Tools and Platforms:** Convex, FastAPI, Streamlit, React, Jupyter Notebook, Together AI, Supabase, Cohere, Vercel, Docker, Git/GitHub

## Projects

**SolomindLM – AI-based learning app | React, TypeScript, Convex, LangChain, LangGraph, RAG** Website

- Architected and shipped SolomindLM end to end as a production LLM SaaS: Convex backend, multi-tenant auth, and Stripe billing, owning the full lifecycle from experimentation through evaluation to production monitoring across 10 feature surfaces
- Shipped 9 LangGraph agent graphs (deep research, literature review, report, flashcard, quiz, mind map, spreadsheet etc.), each with documented tool integrations, multi-step planning, cross-step memory management, persistent HTTP streaming, and 25-step recursion limits
- Designed a multi-stage RAG pipeline (220-token overlapping chunks, metadata schema, 1024-dim vector indexing, cross-encoder reranking) with multi-modal ingestion across websites, articles, audio, PDFs, PowerPoints, and Google Docs, behind a swappable Claude/OpenAI model layer with cost controls
- Implemented eval pipelines with production monitoring for each agent graph, tracing retrieval grounding, output correctness, and task completion against threshold metrics across an 83-file, 15,000+ line test suite that gates every release before it reaches paying subscribers

**Quant Portfolio Optimization | Python, CVXPY, XGBoost, Random Forest, FastAPI** GitHub Repo

- Built an end-to-end financial data pipeline and ML system. Engineered 41+ technical indicators from Yahoo Finance, trained Random Forest and XGBoost models achieving 63.6% directional accuracy, and deployed predictions via FastAPI REST endpoints
- Implemented walk-forward backtesting with 7.5 bps transaction costs and portfolio optimization using CVXPY (Mean-Variance, CVaR, Black-Litterman with Ledoit-Wolf covariance shrinkage)
- Delivered risk analytics (Sharpe ratio, max drawdown, volatility) across 19 stocks, translating model performance into risk-adjusted metrics used in regulated asset management reporting

**CrownCall – Voice AI Scheduling Agent | Python, FastAPI, VAPI, OpenDental API** GitHub Repo

- Built a FastAPI backend that lets a VAPI voice agent parse spoken dates and book, reschedule, or cancel OpenDental appointments, replacing a 6-node n8n flow and cutting the booking path from ~4s to ~800ms p95
- Designed an OpenDental adapter (FHIR dual-key auth, duration Pattern encoding, Break-API cancels) with a local availability calculator that recovered open slots on ~40% of queries where the native slots endpoint returned empty
- Added connection pooling, retries, and a circuit breaker so PMS outages returned a spoken “call the office” fallback instead of a 5xx; tool-call success stayed above 99% in voice sessions

## Work Experience

**Data Analyst Intern | Spintech Associates | Dhaka, Bangladesh** May 2023 - August 2023

- Built and maintained Power BI dashboards to monitor sales KPIs, driving an 8% increase in revenue
- Wrote SQL queries to extract and reconcile inventory data, reducing stock discrepancies by 15% and improving demand forecasting
- Analyzed pricing and promotional performance data with the sales team, surfacing product-level insights that guided campaign decisions

## Education

**University of British Columbia, Bachelor of Science in Statistics** September 2021 - April 2026

**Coursework:** Data Analytics, Statistical Inference, Finding Relationships in Data, Statistical Modeling for Data Science, Relational Databases, Artificial Intelligence, Data Structures, Software Construction, Applied Machine Learning, Stochastic Processes

## Awards & Volunteering

**BC Hacks 4.0, Most Diverse Hack Award for developing an Android app.** November 2022

**AMS Food Bank Volunteer, Supported inventory management and client services.** May 2025 - August 2025
